

COPYRIGHTED MATERIALS

Plagiarism

The plagiarism policy created by New Mexico State University is found at <http://www.nmsu.edu/~vpsa/SCOC/misconduct.html>. The following definition of plagiarism was taken directly from the “Student Code of Conduct.”

“**Plagiarism** is using another person’s work without acknowledgment, making it appear to be one’s own. Any ideas, words, pictures, or other intellectual content taken from another source must be acknowledged in a citation that gives credit to the source. This is irrespective of the origin of the material, including the Internet, other students’ work, unpublished materials, or oral sources. Intentional and unintentional instances of plagiarism are considered instances of academic misconduct. It is the responsibility of the student submitting the work in question to know, understand, and comply with this policy. If no citation is given, then borrowing any of the following would be an example of plagiarism:

- an idea or opinion, even when put into one’s own words (paraphrase)
- a few well-said words, if these are a unique insight
- many words, even if one changes most of them
- materials assembled by others, for instance quotes or a bibliography
- an argument
- a pattern of ideas
- graphs, pictures, or other illustrations
- facts
- all or part of an existing paper or other resource

*This list is not meant include all possible examples of plagiarism.”

For more information about plagiarism, please also visit the library plagiarism page at <http://lib.nmsu.edu/plagiarism/>.

Using or Reproducing Copyrighted Materials

Caution: Please note that there is a difference between using copyrighted materials and reproducing those same materials. Please avoid possible legal action against you for copyright infringement. Stanford University has an excellent site explaining fair use at <http://fairuse.stanford.edu>.

The Chicago Manual of Style, 15th ed. and the APA Manual, 5th edition also have good discussions of "fair use."

ProQuest is not responsible for any damages which may arise from copyright violation. Should any publisher find that you have infringed upon the copyright, you are responsible for all fines which a court may assess against you.

Fair Use of Copyrighted Material

The author of a thesis or dissertation is expected to conform to provisions of the copyright law in regard to quoting from, modifying, or reproducing copyrighted material. Again, Stanford University has an excellent site explaining fair use at <http://fairuse.stanford.edu>.

As the author of the dissertation, you will be asked to certify that any previously copyrighted material used or reproduced in your work, beyond "fair use," is with the written permission of the copyright owner (which is not necessarily the author).

- When a quotation, even if less than 150 words, comprises a substantial proportion of the source, permission is needed for example, if you have a poem of 10 lines and you reproduce 5 lines you are probably infringing the copyright since that is a substantial portion of the work. Reproduction of any item that is a complete unit in and of itself (such as a cartoon) without permission is infringement.
- Long quotations (the maximum word limit varies from publisher to publisher), reproduction of maps, statistical tables, figures, standardized tests, and so on, require written permission from the copyright owner in order to reproduce or modify them.
- If you are unsure about the legality of reproducing previously published materials, consult the permissions editor at the publisher.
- Include permissions in the acknowledgments as well as on the actual item being reproduced. The copyright permission you receive from the copyright holder will frequently specify the format and wording of the permission statement to appear on the reproduced material.

Requesting Permission to Reproduce Previously Copyrighted Materials

Note that there is a difference between using the material and reproducing the material. Unless the item is a standardized test or something similar, permission to use is not usually needed. Permission to reproduce is always needed.

Send all requests for permission to the copyright holder (1) in writing and (2) in duplicate. Be sure to keep a copy of the letter for reference. The copyright holder will sign and return one copy of the request, noting any fee required for the proposed use and any special conditions under which the grant is made. The permissions department of the publisher will retain the second copy of the request in the copyright holder's files.

The request must contain explicit information:

1. The title of the original work and exact identification, with page numbers, of what is to be reprinted (include table or figure number, title of a poem, or for prose, the opening and closing phrases).
2. How the information is to be used: modified, reproduced as a complete unit, and so on.
3. A statement must be included to the effect that ProQuest may supply single copies of the dissertation on demand. Also request permission to publish in electronic formats.
4. The kind of rights requested (the most limited acceptable rights would be "nonexclusive world rights in the English language, for one edition," the broadest-- which could be limited by the granting publisher--might be "nonexclusive world rights in all languages and for all editions").
5. Permission granted for reproduction in a thesis or dissertation will not apply to any publications based on the thesis or dissertation. New permissions must be obtained for such publications.

Permission Letters

- Copies of permission letters from copyright owners must be attached to the "Doctoral Dissertation Agreement Form" that you, as author, will complete and submit to Branson Library along with the three or four required copies of the dissertation.
- These permission letters must state that the copyright owner is aware that ProQuest may supply single copies of the dissertation upon demand and may make the document accessible in electronic formats. Unless this sentence is part of the permission request, ProQuest cannot provide copies of your dissertation to any individual or institution which may want to purchase a copy. If permissions are not supplied to ProQuest, copyrighted materials will not be microfilmed and cannot be made available through ProQuest.

Reproducing Standardized Tests

Reproducing a standardized instrument in your thesis is not necessary. Cite the instrument used in your text and include an entry for the work in the bibliography. Then, anyone who wants to consult the survey can retrieve it from a library. Most publishers will not give permission to reproduce their surveys in whole or in part.

Reproducing Unpublished Tests

If you wish to reproduce a survey that another student developed for the thesis, you must treat that survey as if it were a published test. Acquire written permission from the student that developed it, so you can use the instrument and reproduce the survey.
